

**AMENDMENTS TO THE SPECIFICATION**

I. Please replace the paragraph beginning at page 7, line 28 which starts with “As shown in the figure, in...” with the following amended paragraph.

As shown in the figure, in the image sensor system 10, the file storage folder structure 41 of the memory card device 40 mounted in the digital still camera 11 is hierarchical folder structure and includes a root folder 42 ~~ad~~ and a subfolder 43 generated by the digital still camera 11.

II. Please replace the paragraph beginning at page 8, line 11 which starts with “As a result, when...” with the following amended paragraph.

As a result, when the detected and file-analyzed identifying file 54 45 is recognized as the identifying file 45 of the transmission origin preset by the present system 1, the copy application software 62, provided in the PC 30, is automatically activated by the previously described monitoring resident software 61.

III. Please replace the paragraph beginning at page 7, line 28 which starts with “Accordingly, the identifying file...” with the following amended paragraph.

Accordingly, the identifying file 45 for the memory ~~ead~~ card device 40 installed in the digital still camera 11 is stored in the root folder 342 recognized by the PC 30, as an identifying file 345. The file (image file) 46 photographed using the digital still camera 11 is stored in the subfolder 343 as a file (image file) 346.
